

ARAVIND PURANAM

Android Developer | Kotlin | Jetpack Compose | Enterprise SaaS | Offline-First Architecture | Background Processing
+91 8247004574 | vnaravindganes.p@gmail.com | Hyderabad, India | [linkedin.com/in/aravind-puranam](https://www.linkedin.com/in/aravind-puranam)

PROFESSIONAL SUMMARY

Android Developer with 2+ years of experience building Kotlin applications for enterprise SaaS and product environments. Contributed to EFFORT, a no-code field operations platform serving 150+ enterprise clients, 50,000+ users across 10+ countries, and processing 2M+ daily activities. Technical focus areas include Jetpack Compose, WorkManager, offline-first architecture with Room Database, Fused Location Provider integration, and crash/ANR diagnostics using Firebase Crashlytics. Designs and ships production Android applications following MVVM and Clean Architecture.

TECHNICAL SKILLS

Languages: Kotlin, Java

Android: Android SDK, Jetpack Compose, XML Layouts, WorkManager, Navigation Component, ViewModel, LiveData, Kotlin Coroutines, StateFlow, SharedFlow, Material Design 3

Architecture: MVVM, Clean Architecture, Repository Pattern, Offline-First Architecture, Metadata-Driven Architecture

Data: Room Database, SQLite, Dynamic Schema Design

Networking: Retrofit, REST APIs, JSON Parsing

DI: Hilt, Koin

Firebase: Crashlytics, FCM, Analytics, Realtime Database

Tools: Android Studio Profiler, Git, Gradle, SonarQube, Logcat

Practices: Agile, Code Reviews, Unit Testing, UI Testing, ANR Investigation, Root Cause Analysis, CI/CD

PROFESSIONAL EXPERIENCE

Associate Application Developer | Spoors Technology Solutions — Hyderabad *May 2025 – Present*

EFFORT: No-code field operations SaaS | 150+ clients | 50,000+ users | 10+ countries | 2M+ daily activities

- Diagnosed and resolved 100+ live production crashes and ANRs within SLA timelines using Firebase Crashlytics and Android Studio Profiler; delivered hotfix releases with root cause documentation.
- Migrated 12+ legacy JobIntentService implementations to WorkManager across background sync, location tracking, APK distribution, file transfer, and offline upload pipelines.
- Architected and maintained offline-first synchronization infrastructure using Room Database with metadata-driven schema updates, dynamic table creation, and data recovery for uninterrupted field operations.
- Engineered GPS tracking, Fused Location Provider integration, background location updates, and geo-fenced check-in/check-out workflows for real-time employee activity tracking.
- Delivered Customer 360 Views, Targets vs. Achievements Dashboards, Work Actions Timeline UI, multi-language support, and configurable business process modules.
- Modernized XML-based screens to Jetpack Compose and implemented new Compose UI modules using ViewModel, StateFlow, and MVVM-based architecture patterns.
- Enhanced metadata-driven platform capabilities including dynamic forms, validation frameworks, business rules engines, and runtime application behavior configuration.

Full product delivery across three commercial Android applications: Social Media Platform, E-commerce Platform, and CRM Module.

- Developed a social media Android application from scratch featuring real-time group chat, Firebase activity feeds, location-based content discovery, FCM push notifications, and a custom video compression pipeline using native Android Media APIs and Kotlin Coroutines.
- Implemented an e-commerce Android application with product catalog, cart management, payment gateway integration, and order tracking using Retrofit and REST APIs.
- Designed and shipped a CRM module with geolocation-based attendance tracking, real-time activity feeds, and REST API integration using MVVM Architecture, ViewModel, LiveData, and Kotlin Coroutines.
- Standardized MVVM and Repository Pattern architecture across all three products, establishing consistent engineering conventions and reducing feature onboarding overhead.
- Designed and validated an OCR proof-of-concept for business card, PAN card, and cheque extraction using Spring Boot and Kotlin.

KEY ENGINEERING CONTRIBUTIONS

- Investigated and resolved 150+ Android production crashes and ANRs across enterprise deployments using Firebase Crashlytics and Android Studio Profiler; delivered hotfix releases with root cause documentation.
- Implemented a custom offline image and video compression pipeline using Kotlin Coroutines and native Android Media APIs, reducing upload payload sizes without third-party dependencies.
- Established Kotlin and MVVM + Clean Architecture conventions across a production Android codebase, reducing technical debt and improving cross-team code consistency.

EDUCATION

Master of Computer Applications (MCA) Aurora's PG College — Hyderabad, India	CGPA: 8.1 / 10
Bachelor of Science — Computer Science (B.Sc.) Jahnavi Degree College — Hyderabad, India	CGPA: 8.6 / 10
