

ARAVIND PURANAM

Android Developer | Kotlin | Jetpack Compose | MVVM | Clean Architecture | Background Processing
+91 8247000457 | ynaravindganeshe.p@gmail.com | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Android Developer with nearly 3 years of experience building enterprise SaaS and consumer Android applications using Kotlin, Jetpack Compose, WorkManager, Room, Retrofit, MVVM, and Clean Architecture. Contributed to EFFORT, a large-scale field operations platform serving 50,000+ users across 10+ countries, with expertise in offline-first architecture, background processing, location tracking, and production issue resolution. Experienced in modernizing legacy Android systems, improving application stability through crash and ANR analysis, and delivering scalable mobile solutions for enterprise customers.

TECHNICAL SKILLS

Android: Android SDK, Jetpack Compose, XML, WorkManager, Navigation Component, ViewModel, LiveData, StateFlow, SharedFlow, Material Design 3

Languages: Kotlin, Java

Architecture: MVVM, Clean Architecture, Repository Pattern, Offline-First Architecture

Concurrency: Kotlin Coroutines, Flow, StateFlow

Data: Room Database, SQLite

Networking: Retrofit, REST APIs, JSON

Dependency Injection: Hilt, Koin

Firebase: Crashlytics, Cloud Messaging (FCM), Analytics, Realtime Database

Tools: Android Studio, Git, Gradle, SonarQube, Android Studio Profiler

Practices: Agile, Code Reviews, Feature Validation, Regression Testing, CI/CD, ANR Investigation, Root Cause Analysis

PROFESSIONAL EXPERIENCE

Associate Application Developer | Spoors Technology Solutions — Hyderabad *May 2025 – Present*

EFFORT: No-code field operations SaaS | 150+ clients | 50,000+ users | 10+ countries | 2M+ daily activities

- Diagnosed and resolved 100+ live production crashes and ANRs within SLA timelines using Firebase Crashlytics and Android Studio Profiler; delivered hotfix releases with root cause documentation.
- Migrated 12+ background processing components from JobIntentService to WorkManager, modernizing Android background execution workflows across synchronization, location tracking, file transfer, APK distribution, and offline data upload pipelines.
- Maintained and enhanced offline-first synchronization architecture using Room Database, enabling reliable data capture, storage, and recovery for field teams operating in low-connectivity environments.
- Implemented GPS tracking, Fused Location Provider integration, background location updates, and geo-fenced attendance workflows supporting real-time field activity monitoring across enterprise deployments.
- Delivered Customer 360 views, performance dashboards, work activity timelines, multilingual support, and configurable business workflows for enterprise field operations users.
- Modernized legacy XML-based screens by adopting Jetpack Compose, ViewModel, and StateFlow, improving UI maintainability and alignment with modern Android development practices.

- Enhanced metadata-driven platform capabilities including dynamic forms, validation frameworks, business rules engines, and runtime application behavior configuration.
- Proposed, designed, and implemented an OCR proof-of-concept for extracting information from PAN cards, business cards, and cheques using Kotlin and Spring Boot.

Android Developer | Monosage — Hyderabad

Sep 2023 – May 2025

Full product delivery across three commercial Android applications: Social Media Platform, E-commerce Platform, and CRM Module.

- Developed a social media Android application from scratch featuring real-time group chat, activity feeds, push notifications, location-based discovery, and a custom media compression pipeline using Android Media APIs and Kotlin Coroutines.
- Implemented an e-commerce Android application with catalog browsing, cart management, payment gateway integration, and order tracking workflows using Retrofit and REST APIs.
- Designed and shipped a CRM module with geolocation-based attendance tracking, real-time activity feeds, and REST API integration using MVVM Architecture, ViewModel, LiveData, and Kotlin Coroutines.
- Standardized MVVM and Repository Pattern architecture across all three products, establishing consistent engineering conventions and reducing feature onboarding overhead.

EDUCATION

Master of Computer Applications (MCA)

Aurora's PG College — Hyderabad, India

CGPA: 8.1 / 10

Bachelor of Science — Computer Science (B.Sc.)

Jahnvi Degree College — Hyderabad, India

CGPA: 8.6 / 10
