

ARAVIND PURANAM

Android Engineer | Kotlin | Jetpack Compose | MVVM | Clean Architecture | Offline-First
+91 8247000457 | vnaravindganesht@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Built and maintained production-grade Android applications for 3 years across enterprise SaaS and consumer platforms — including EFFORT, a field operations platform serving 50,000+ users across 10+ countries with 2M+ daily activities. Triaged 100+ production crashes and ANRs using Firebase Crashlytics and Android Studio Profiler; engineered offline-first architecture with WorkManager and Jetpack Compose. Delivered full feature ownership — from configurable UI and location-based systems to payment integrations — across startup and enterprise environments.

TECHNICAL SKILLS

Languages: Kotlin, Java

Android SDK & Jetpack: Jetpack Compose, ViewModel, Navigation, Room, WorkManager, Foreground Services, LiveData, DataStore, XML Layouts

Architecture: MVVM, Clean Architecture, Repository Pattern, Offline-First Architecture, Mutex Concurrency

Concurrency: Kotlin Coroutines, Flow, StateFlow

Networking: Retrofit, REST APIs, JSON, OkHttp, MQTT (Eclipse Paho)

Dependency Injection: Hilt, Koin

Firebase: Crashlytics, Cloud Messaging (FCM), Analytics, Realtime Database

Google Services: Google Maps SDK, Places API, Directions API, Fused Location Provider, Geofencing

Payments: Razorpay Payment Gateway

Data: Room Database, SQLite, SQLCipher, DataStore

Tools: Android Studio, Android Studio Profiler, Git, Gradle (Product Flavors), SonarQube

Practices: Agile, CI/CD, Code Reviews, ANR Investigation, Root Cause Analysis, Regression Testing

PROFESSIONAL EXPERIENCE

Associate Application Developer | Spoors Technology Solutions — Hyderabad May 2025 – Present

EFFORT: No-code field operations SaaS | 150+ enterprise clients | 50,000+ users | 10+ countries | 2M+ daily activities

- Resolved 100+ live production crashes and ANRs within SLA using Firebase Crashlytics and Android Studio Profiler; authored root cause documentation and delivered targeted hotfix releases.
- Migrated 12+ legacy background services to WorkManager, guaranteeing transactional upload execution across sync, location tracking, file transfer, and APK distribution pipelines while meeting Android 12+ Doze mode constraints.
- Architected an offline-first sync pipeline synchronizing 200+ relational SQLite/Room tables across unreliable networks, enabling field teams to execute operations without internet connectivity across 10+ countries.
- Integrated 5+ location APIs (Google Maps SDK, Fused Location Provider, Geofencing) and stabilized background location tracking via Foreground Services and WakeLocks, processing route calculations across 2M+ daily field activities.
- Shipped Customer 360 views, performance dashboards, multilingual support, and configurable business workflows, expanding platform capabilities for enterprise field operations clients.
- Architected the Jetpack Compose migration of the Customer 360 module, aggregating 5+ local data sources into a reactive StateFlow pipeline and engineering thread-safe workflows using Kotlin Mutex, cutting UI layer code by ~30%.
- Extended the metadata-driven platform with configurable form rendering, validation rules, and business logic engines, enabling 10+ workflow types across enterprise client deployments.
- Managed a multi-tenant build architecture using Gradle Product Flavors for 10+ enterprise clients and integrated real-time messaging via the Eclipse Paho MQTT client.

- Initiated and built an OCR pipeline, automating structured data extraction from 3 document types (PAN cards, business cards, cheques) using Kotlin and Spring Boot.

Android Developer | Monosage — Hyderabad

Sep 2023 – May 2025

Three commercial Android applications — Social Media Platform, E-commerce Platform, and CRM Module

- Launched a social media Android application from scratch with 6+ core features — real-time group chat, activity feeds, push notifications, location-based discovery, and a custom media compression pipeline — using Android Media APIs and Kotlin Coroutines.
- Engineered an e-commerce Android application with 5+ integrated modules — catalog browsing, cart management, Razorpay payment gateway, secure checkout, and order tracking — using Retrofit and REST APIs.
- Developed and shipped a CRM module with 2 real-time tracking systems — geolocation-based attendance and live activity feeds — built on MVVM, ViewModel, LiveData, and Kotlin Coroutines.
- Established MVVM and Repository Pattern conventions across all three products, creating shared engineering standards that accelerated feature delivery and reduced cross-app inconsistency.

EDUCATION

Master of Computer Applications (MCA)

CGPA: 8.1 / 10 | 2020 – 2022

Aurora's PG College — Hyderabad, India

Bachelor of Science — Computer Science (B.Sc.)

CGPA: 8.6 / 10 | 2017 – 2020

Jahnavi Degree College — Hyderabad, India
